

# GOT PL NES?

Milton has been bombarded with incessant, low-flying planes for too long and plane traffic is expected to substantially INCREASE in response to the Boston Logan Airport Noise Study (BLANS) at Logan!

Air and noise pollution are not just inconveniences; they are major threats that affect our health, sleep, and quality of life.

A concerned group of citizens has come together to share information and explain what we can do as a community to advocate for our rights to clean air and quiet skies.
